

# WONDERFUL WILDLIFE

By Olivia Fitzpatrick Animal and Wildlife Correspondent

## Olivia's Wildlife Facts

Wildlife can be all about animals that sometimes don't live in the zoo; they live out in the wild like in hot or cold places.

It's a type of place where the animals can go out and hunt for prey because if they lived in the zoo they wouldn't be allowed to do that because they are behind bars.

## Lions

Lions are probably the fiercest animal on earth. They always go out and hunt other animals.

Here is a picture of a lion trying to eat a zebra but if lions try to hunt zebras, zebras would protect themselves by kicking the loin. Lions are definitely part of the food chain.

## Elephants

Elephants are the biggest land

animals believe it or not. Elephants are nearly extinct because people are killing them because of their tusks. If an elephant does get killed their tusks get made into medicine and statues.

## Giraffes

Giraffes are really tall because their necks are really long. They can reach leaves in tall trees. That's why at the zoo they are outside and indoors.
